

1. When selecting users, the **user names and their roles (e.g., Business Head, TL)** appear **misaligned** in the dropdown list. The text and layout are not properly aligned, causing uneven spacing.

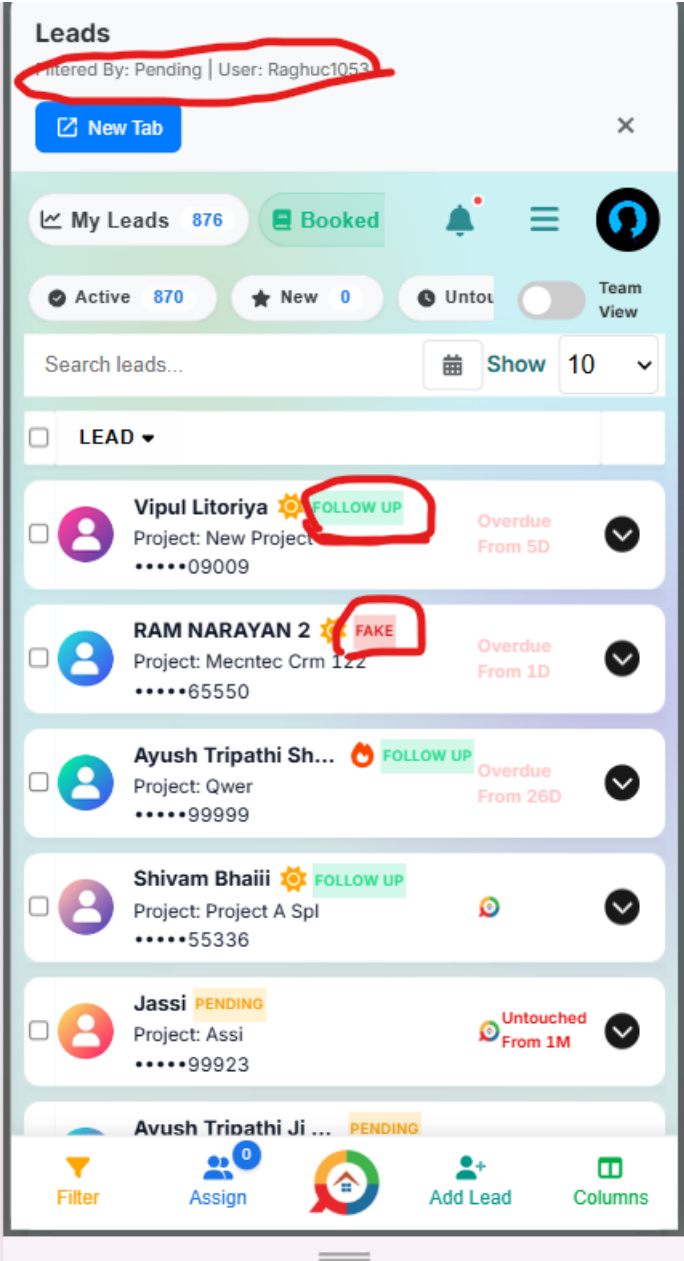

When selecting a user, if the list is long, cannot scroll to see more users.

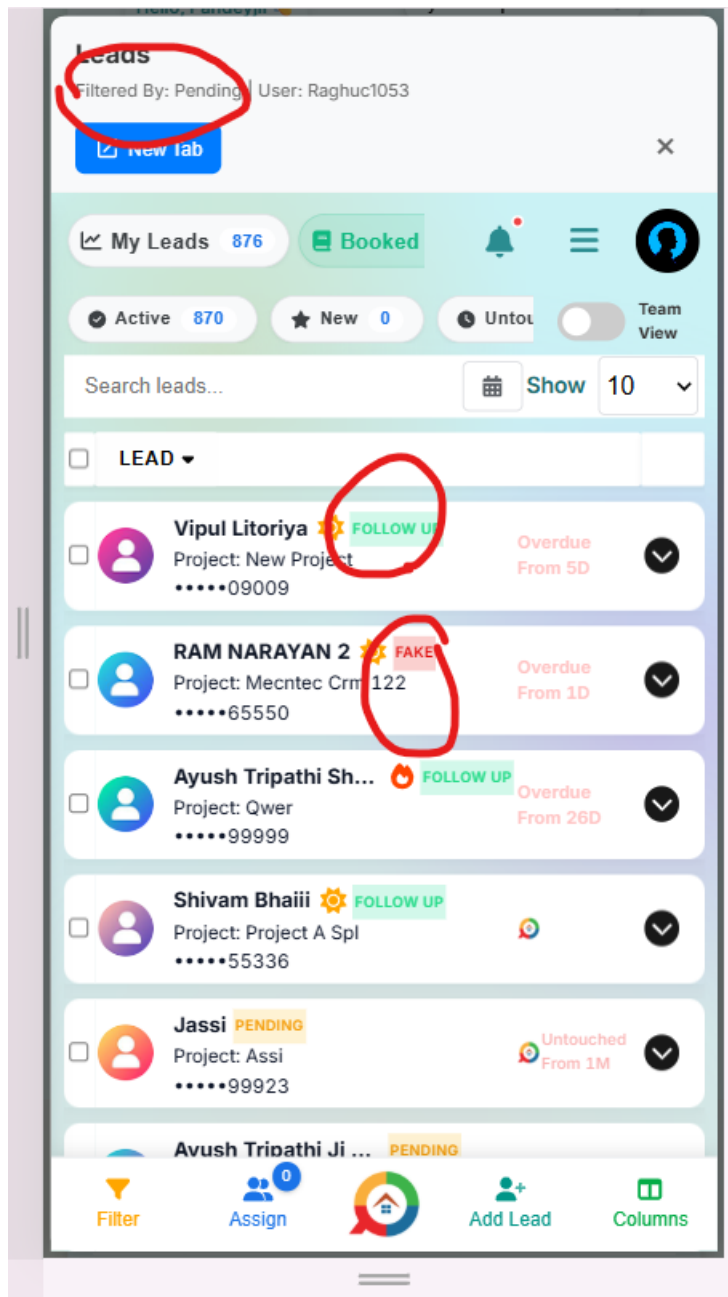

2. When apply Custom date filter with valid date, nothing is getting selected.

3. When I open pending leads from the dashboard, the Leads page title shows “Filtered By: pending,” and the data is correctly filtered. After clicking **Clear Filter**, all leads are displayed, but the title still shows “Filtered By:PENDING.”

4. Select or search user Field accepts infinite characters, leading to overflow and layout distortion.

Input should be restricted to a reasonable character limit (e.g., 25–30). UI should remain aligned.

The user selection input field allows entry of **numbers and special characters**, which should be restricted to **alphabetic characters only** (since usernames are text-based).
